

Memory Lab

VHS Instructions

Step 1:

The JVC VHS Player will play VHS and Super VHS tapes. All cassettes require inspection to ensure compatibility and condition.

To start digitizing, turn on the player by pressing the power button at the top left. Ensure the S-VHS button is selected as indicated by a pink light.

Step 2:

Insert the tape being digitized into the player on the right side. All tapes must be facing with the lettering facing upward and the exposed tape side towards the player.

After inserting the tape, press play or rewind to ensure starting at the beginning of the tape.

Step 3:

Once the tape begins to play, the video will be displayed on the large television. If it is satisfactory, press the record button on the ClearClick HD Capture Box. When finished recording, press the record button again.

When recording, the green light will flash and when not recording, it will be solid green.

After finishing scanning, please ask at the circulation desk for help with file transfer.
